✓ **Ethernet Cable**

✓ **OBD-II Cable**

## Pre-Setup Check List

Before setup, please ensure you have the following:

- ✓ An internet connection with minimum up/down speeds of 10Mbps
- ✓ A computer and web browser for wireless network configuration (Google Chrome is recommended)
- ✓ Access to an open ethernet port on your network device
- ✓ Access to the vehicle's OBDII port
- ✓ A battery support device is connected to the vehicle

1

## Connect to Network

Locate an open Ethernet port on your network device

Connect the provided Ethernet cable to the open network port and the port on your asTech device.

2

## Connect to Vehicle

With battery support in place, switch the vehicle to the “ON” position, but **do not start it**.

*Note: If battery support is unavailable you may need to have the key on and engine running.*

Connect the OBD-II cable to both the vehicle and your asTech device. An IP address, and “Connected & Waiting” should appear on the device screen. The device is now ready to use.

3

## Connect to Wi-Fi (Optional)

A screenshot of a web browser address bar. It shows navigation icons (back, forward, close) and an information icon. The address field contains the text "10.200.1.51/wifi.shtml".

*Note: If you wish to disconnect the Ethernet cable, and use the device wirelessly, you can complete the steps below.*

In the address field of a web browser, enter the IP address displayed on the asTech device screen, followed by “/wifi.shtml”.

Select the network name of your business under “SSID”, and enter the network password in the “Pass Phrase” field.

4

## Submit a Support Request

To submit a Support Request, visit our website, or download the asTech app (available for iOS and Android).
