**Dynamic  
Calibrations**

**asTech**  
Driven by Repairify™

**Static  
Calibrations**

## **Do-It-Yourself to Do-It-For-Me**

Technology is rapidly increasingly evolving across the automotive and vehicle landscape shifting everything including how collision operators need to recalibrate the dozens of sensors on today's vehicles – shifting many repairs from DIY to now requiring professional, certified technician support.

## **The Power of Customization with Access to Scale**

The tools used for static ADAS calibrations use a series of specific targets that the sensors must be able to read to recalibrate accurately. asTech is your shop's automatic gateway to our expert remote calibration technicians. They're on standby and ready to guide your team through each step of the OEM procedure. No matter the vehicle, asTech will ensure it's always calibrated correctly and safely returned to the customer.

## **When to Recalibrate the ADAS System of a Vehicle?**

- ▶ When a vehicle's windshield has been replaced or removed for any reason.
- ▶ When a wheel realignment has been performed.
- ▶ When a car suspension has been changed.
- ▶ When a vehicle camera has been disconnected for any reason.
- ▶ When a vehicle has been in a collision.

**Are static calibrations the right move to take your shop  
to the next level?**
